

Streamline Your Prescription Workflow With VetScript

Outdated workflows shouldn't stand between vets and the animals they treat.

VetScript integrates directly with practice software to reduce administrative burden, unlocking more time for veterinary practices to focus on patient care.

Unlock new efficiencies in your vet practice (and better care for patients).

Today, any time a vet requests medication to be dispensed by an external pharmacy — whether that's an animal owner's chosen pharmacy or a compounding pharmacy preparing a tailored medication — they must rely on handwritten, paper prescriptions because the law requires it.

VetScript unlocks true e-script capability. E-prescriptions are created digitally, logged inside your practice software and transmitted securely to authorised pharmacies. Pharmacies can begin dispensing immediately while waiting for the paper copy, reducing bottlenecks and errors.

VetScript helps veterinary practices save up to **20 minutes per e-script**. For 10 scripts a week, that's 13+ hours a month your team can reinvest in patient care.

End the admin bottleneck

Manual prescribing burns time every single day. Handwritten scripts and double entry across systems all add up, leaving veterinary practice teams overworked.

VetScript instantly upgrades your practice software, enabling a fully digital prescribing workflow. E-scripts are created inside your practice software, auto-filled with patient and medication details, and sent securely to an authorised pharmacy in a few clicks.

Access built-in traceability & compliance

Paper-reliant workflows are vulnerable to gaps in reliability, misinterpretations and traceability.

VetScript turns compliance into part of the workflow. Every e-script is secure and traceable, designed to help ease the burden on vets and improve data security and efficiency of animal medicine management.

A script is securely stored in the VetScript PES (the central infrastructure that houses prescription data and enables a pharmacy and practice software to connect), recorded in the practice software, linked to the prescribing veterinarian and fulfilled only by an authorised pharmacy, protecting veterinary practices from script tampering and making record keeping simple.

Unlock a faster & native e-prescribing workflow

Most new tools add steps instead of removing them, leaving vets frustrated and teams stuck with more admin.

VetScript integrates natively inside your practice software. It works where you already work, so your team can prescribe faster and more accurately, without disruption.

E-scripts reach your authorised pharmacy faster than paper scripts and more securely than emails, cutting delays and transcription errors.

Trusted by leaders in veterinary care

Join a growing network of pharmacies, software and industry partners shaping the future of prescribing.
